

PHYSICAL EDUCATION

0413/12

Paper 1

October/November 2017

MARK SCHEME

Maximum Mark: 80

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2017 series for most Cambridge IGCSE[®], Cambridge International A and AS Level components and some Cambridge O Level components.

© IGCSE is a registered trademark.

This document consists of **22** printed pages.

Question	Answer	Marks
1	intrinsic / extrinsic / rewards / incentives;	1

Question	Answer	Marks
2	all body systems work well / free from injuries and illness / able to carry out everyday tasks; <i>Accept equivalent wording.</i>	1

Question	Answer	Marks
3	easy access / able to watch events from other parts of the world / able to see the detail of the event / expert commentary gives greater understanding / able to view role models / increases viewer's interest in sport / increases participation;	1

Question	Answer	Marks
4	For example elbow / knee;	1

Question	Answer	Marks
5	become fat / over-weight / obesity / weight gain / heart disease / stroke / high blood pressure / diabetes / metabolic syndrome / cancer / osteoarthritis;	1

Question	Answer	Marks
6	open-water swimming / canoeing / hill walking / campcraft / horse riding / orienteering / rock climbing / rowing / sailing / skiing / snowboarding / windsurfing / cross-country running etc.; <i>Accept other valid answers.</i>	1

Question	Answer	Marks
7	A: deltoid; B: pectoral;	2

Question	Answer	Marks
8	<p><i>Treatments must be different. One mark for an appropriate treatment for a given injury.</i></p> <p><i>For example:</i></p> <p>stress fractures – rest / ice / physiotherapy;</p> <p>fractures – immobilise / hospital treatment;</p> <p>bruising – ice;</p> <p>dislocation – immobilise / treatment at a hospital;</p> <p>sprain / tendon injury – rest / ice / compression / elevation;</p> <p>ligament – rest / ice / immobilise / hospital treatment / physiotherapy;</p> <p>pulled muscle / strain – rest / ice / compression / elevation / ice / massage / physiotherapy / hospital treatment;</p> <p>winding – sit learning forward / massage / encourage steady breathing;</p> <p>cuts / grazes – elevate limb / cover / apply pressure to cut;</p> <p>concussion – rest / prevent from sleeping / seek medical advice;</p> <p>blister – rest / keep clean / cool;</p> <p><i>Accept physiotherapy once for a relevant injury type.</i></p> <p><i>Accept soft tissue injuries with a component of RICE.</i></p>	2

Question	Answer	Marks
9	provide base line information; monitor progress / compare to previous results; establish readiness for an event; identify areas for improvement; motivate / set goals / provide changes in routine / add interest; monitor the quality of a training programme;	3

Question	Answer	Marks
10	to decrease the chance of muscle injury; prevents blood pooling / dizziness / feeling faint; gradually / OWTTE reduces heart rate / body temperature / breathing rate; to prevent muscles soreness; shortens recovery time / allows performer to be ready to perform quicker; removes / oxidises lactic acid / repays oxygen debt; provides a time to evaluate performance;	3

Question	Answer	Marks
11	<p><i>Examples must be different.</i></p> <p><i>Examples could include:</i></p> <p>athletics – improve the accuracy of timing and measuring / the rebound quality of tracks has improved to enable sprinters to run faster;</p> <p>tennis – hawk eye / eq. has ensured the accuracy of umpires and line judge calls / tennis rackets have become lighter but generate more power / video analysis now possible;</p> <p>rugby – TMO ensures the accuracy of tries being scored with synchronised camera angles / medical improvements to develop concussion protocols enable players to be protected following head injuries;</p> <p>cycling – use of light weight but stronger materials enables more speed / clothing has become more light weight preventing vibration soreness / compression garments give improved blood flow / advanced clothing controls sweating;</p> <p><i>Accept other valid examples.</i></p>	4

Question	Answer	Marks
12(a)	<p>no environmental factors to consider;</p> <p>opponents cannot influence skill being performed;</p> <p>less to distract a performer;</p> <p>limited range of techniques needed so easier to practice / skill can be broken down into parts;</p> <p>easier to control speed or pace of activity;</p> <p>skill tends to follow set routine;</p>	2

Question	Answer	Marks
12(b)	<p><i>Allow any three descriptions:</i></p> <p><i>over:</i> loss of control; too aggressive; panic / nervous / worry / try too hard / try to play too quickly;</p> <p><i>optimum:</i> motivates to improve performance react / respond quicker; enables greater focus;</p> <p><i>under:</i> poor concentration / easily distracted; lack effort / energy at low level;</p> <p><i>Allow one mark for description of the inverted-U theory.</i></p>	3
12(c)	<p><i>No need to name the sport to gain a mark.</i></p> <p><i>Any skill-related component can be applied to each sport with a reason.</i></p> <p><i>Examples could include:</i></p> <p>picture A – speed of reaction – the performer needs to respond to the movements of the opponent / because they are in close proximity there is little time to respond;</p> <p>picture B – balance – the performer needs to be able to land when catching the ball and not overbalance otherwise cannot pass the ball quickly to a team member;</p> <p>picture C – agility – needs to be able to change direction around objects to control the speed when travelling down the slope;</p>	3

Question	Answer	Marks
12(d)	knee – flexion / extension; shoulder – flexion / extension / abduction / adduction / rotation; <i>Accept circumduction.</i> an appropriate example of a benefit to a performer of the type of movement identified for the shoulder, e.g. abduction / adduction to allow a golf swing;	3
12(e)(i)	exchange of carbon dioxide and oxygen; between the alveoli and the blood / capillaries; gases move from a high to a low concentration;	2
12(e)(ii)	increase in vital capacity / minute ventilation / the maximum volume of air that can be moved in and out of the lungs in one breath increases; increased strength of respiratory muscles / diaphragm / intercostal muscles; capillarisation / more efficient gas exchange; carbon dioxide removed more quickly from the body / oxygen delivered more quickly to the body / increased VO_2 max.;	2

Question	Answer	Marks
12(f)(i)	age; gender; medical condition; weight / current diet; aims of the person / reasons for wanting to get fit; time available; assessment of initial fitness level; previous exercise experience; range of equipment available; plan for rest periods;	2
12(f)(ii)	less tired / able to exercise for longer / increased stamina / muscular endurance; weight loss; reduction in minor illnesses; lower blood pressure; better control of blood sugar levels; reduces cholesterol; feel better / mood improves / reduces stress / more motivated;	2
12(g)(i)	cardio-vascular endurance / stamina;	1

Question	Answer	Marks
12(g)(ii)	increase in oxygen carrying capacity; increase in the number of red blood cells; improved cardio-vascular endurance on return to lower altitudes; VO ₂ max. increases; increase in the number of small blood vessels;	2
12(g)(iii)	increase in the number of red blood cells can make blood flow sluggish / thicker blood; extra stress on the heart / body; hard to breathe / reduction in oxygen reaching muscles; loss of muscle mass / weight loss; immune system is negatively affected; whilst acclimatising the performance level drops / get tired quickly / lower cardiovascular endurance / risk of overtraining / amount of training reduces initially; loss of appetite reduces muscle repair; altitude sickness / headache / nausea / vomiting / dizziness / insomnia; family issues / social disruption of being away from home; costs;	3

Question	Answer	Marks
13(a)	<p>reduces stress;</p> <p>learns how to cope with emotions / disappointment / able to re-direct thoughts;</p> <p>develops confidence in their own ability;</p> <p>develops a positive attitude / feel good about yourself;</p> <p>personal challenge;</p>	2
13(b)	<p>do not carry some equipment on your own;</p> <p>do not carry equipment if you feel it is too heavy / damaged;</p> <p>know where the equipment is going to be placed before moving it;</p> <p>make sure there is a clear route when carrying equipment / clear route;</p> <p>make sure you work with people of your own size when moving equipment;</p> <p>use correct lifting technique / keep back straight etc.;</p> <p>move slowly / do not rush;</p> <p>put down carefully / slowly;</p> <p>put all small items of equipment in a safe / secure place;</p>	3

Question	Answer	Marks
13(c)	<p><i>One mark for one difference with an appropriate reason.</i></p> <p><i>For example:</i></p> <p><i>endurance athlete:</i></p> <p>more carbohydrate – because energy is required for a longer period of time;</p> <p>more fat – because may run out of energy from carbohydrates;</p> <p>less protein – used for muscle repair rather than growth;</p> <p>more water – stay hydrated during longer event;</p> <p><i>sprinter:</i></p> <p>sprinters eat higher levels of protein to build muscle;</p> <p>less fat – sprinters will not use fat supply and this increases weight;</p> <p><i>Accept reverse arguments. Accept alternative arguments with correct reasons.</i></p>	2

Question	Answer	Marks
13(d)	warm up and cool down correctly; use the correct equipment / footwear / clothing; (<i>Accept examples</i>) know / follow the rules / regulations; check the surface / facilities are safe to use; does not participate when tired / ill; ensure appropriate supervision / a teacher / adult is present; be fit enough to perform at appropriate level, e.g. not lifting weights that are too heavy; have correct technique; play an appropriate level / age group / weight category;	2
13(e)(i)	fartlek training / circuit training / interval training / continuous training;	1

Question	Answer	Marks
13(e)(ii)	<p><i>Max. 3 marks for advantages or disadvantage alone.</i></p> <p><i>For example for fartlek training:</i></p> <p><i>advantages:</i></p> <p>little or no equipment needed;</p> <p>well matched to activity;</p> <p>can vary speed easily;</p> <p>easy to overload as time progresses;</p> <p>rest / recovery can take place during the training session;</p> <p>changes to activity, terrain, etc. prevent boredom;</p> <p>helps prevent overuse injuries;</p> <p>as athlete progresses anaerobic aspects can be introduced / can develop both aerobic and anaerobic systems;</p> <p>low cost;</p> <p><i>disadvantages:</i></p> <p>difficult to have a training partner so becomes isolated;</p> <p>easy to avoid difficult aspects of training;</p> <p>difficult to measure progress;</p>	4

Question	Answer	Marks
13(e)(ii)	<p><i>For example for continuous training:</i></p> <p><i>advantages:</i></p> <p>well matched to activity;</p> <p>easy to carry out;</p> <p>does not require much equipment;</p> <p>good for aerobic fitness / muscle endurance;</p> <p>easy to overload;</p> <p>burns fat;</p> <p>do not need a coach / supervision;</p> <p>low cost;</p> <p><i>disadvantages:</i></p> <p>no anaerobic development;</p> <p>requires motivation;</p> <p>risk of overuse injuries;</p> <p>can be demotivating initially / hard to get started;</p> <p>can be boring;</p>	

Question	Answer	Marks
13(e)(ii)	<p><i>For example for circuit training:</i></p> <p><i>advantages:</i></p> <p>varied so does not become boring;</p> <p>easily adapted;</p> <p>easy to made social / performed with others;</p> <p>can be performed indoors or outdoors;</p> <p>low cost;</p> <p><i>disadvantages:</i></p> <p>requires a lot of equipment;</p> <p>requires time to setup;</p> <p>difficult to make stations different;</p>	

Question	Answer	Marks
13(e)(ii)	<p><i>For example for interval training:</i></p> <p><i>advantages:</i></p> <p>well matched to activity;</p> <p>can vary speed easily;</p> <p>easy to overload as time progresses;</p> <p>rest / recovery can take place during the training session;</p> <p>helps prevent overuse injuries;</p> <p>as athlete progresses anaerobic aspects can be introduced / can develop both aerobic and anaerobic systems;</p> <p>easier for coach supervision;</p> <p>low cost;</p> <p><i>disadvantages:</i></p> <p>can become boring;</p> <p>can be slower to improve;</p> <p><i>Accept other valid answers.</i></p>	
13(f)(i)	<p>isometric;</p> <p>isotonic;</p> <p><i>(Accept concentric; eccentric; isokinetic;)</i></p>	2

Question	Answer	Marks
13(f)(ii)	<p><i>One mark for each advantage that must match the type of contraction. No mark for the type of contraction.</i></p> <p><i>isometric:</i></p> <p>easy to do;</p> <p>requires little time / quick to complete;</p> <p>minimal damage to muscle / pain / stiffness;</p> <p>no need for expensive equipment;</p> <p>can be done anywhere;</p> <p>improves (static) strength;</p> <p><i>isotonic:</i></p> <p>builds a range of motion;</p> <p>strengthens muscle through a full range of movement / improves (dynamic) strength;</p> <p>increases flexibility;</p> <p>can be applied to most sports;</p> <p>wide variety of activities;</p> <p>may not need expensive equipment;</p>	2

Question	Answer	Marks
13(f)(iii)	<p><i>One mark for each example.</i></p> <p><i>Examples could include:</i></p> <p><i>isometric:</i></p> <p><i>in gymnastics:</i></p> <p>when holding a position on the rings;</p> <p><i>in rugby:</i></p> <p>when avoiding being pushed back in a scrum;</p> <p><i>isotonic:</i></p> <p><i>in gymnastics:</i></p> <p>when running in the lead up to a vault;</p> <p><i>in rugby:</i></p> <p>when throwing a pass;</p>	2

Question	Answer	Marks
14(a)	attracts more sponsorship; improvement to facilities; increase in participation levels; improvements in equipment; improvement in training / standards; sport can increase in popularity; fewer people go to live game; sports with little TV coverage become less popular; seeing the same sport / team on TV reduces interest / becomes boring;	2

Question	Answer	Marks
14(b)	<p>meet the needs of a local community;</p> <p>low costs / free access to equipment / facilities;</p> <p>easy to access as locally based;</p> <p>develops greater community cohesion / interact with others;</p> <p>some sports would not take place without voluntary organisations;</p> <p>provide a safe and structured environment for young people to take part in sports / provide coaching opportunities;</p> <p>provide opportunities for inner-city groups to participate in activities in rural areas;</p> <p>provide opportunities for young people to be introduced to different sports / access competitions;</p> <p>provide opportunities for young people to be involved in coaching / admin / officiating, etc.;</p> <p>provide qualified staff for instruction of activities / to improve skills;</p> <p>can be a long-term member;</p>	3

Question	Answer	Marks
14(c)	<p>they live near the sea / lake etc.;</p> <p>school introduces the sport to them;</p> <p>family sail and influence them / family tradition;</p> <p>peer influence to participate;</p> <p>motivated by media / recent event such as the Olympic Games;</p> <p>campaign by local sailing club to encourage participation;</p> <p>costs reduced for young participants / access the boats free, etc.;</p> <p>popular activity in the area they live so becomes a social activity;</p> <p>looks fun / exciting / for enjoyment / for interest;</p> <p>may be physical less demanding than other activities;</p> <p>less interested in team activities;</p>	4

Question	Answer	Marks
14(d)	<p>helps maintain fitness;</p> <p>helps understand the need for a healthy lifestyle;</p> <p>adds to the enjoyment of being at school / gives a sense of identity;</p> <p>allows students to develop basic physical skills;</p> <p>allows students to develop advanced physical skills and play at a higher level / provides more time for activities;</p> <p>introduces students to new activities they might not have the opportunity to play normally;</p> <p>allows students to develop a career path / provide qualifications;</p> <p>adds to the development of confidence and self-esteem;</p> <p>teaches students self-discipline / to accept winning and losing;</p> <p>develops social skills / teamwork;</p> <p>prepares students for life after school;</p> <p>helps reduce stress / break from academic lessons;</p> <p>provides access to facilities / equipment / coaching;</p> <p>develop a positive attitude to academic studies / school work;</p>	6
